

**KUPA**  
STATION

**KUPA**  
STATION

We are a Québec based and operated company located in the Bellechasse region, close to Québec City.

Our mission is to encourage people to drink more water by providing them with a drink that is ecofriendly and that corresponds to their personal taste.

For that purpose, we have designed a turnkey equipment that can be installed in any workplace where environmental, health and well-being values are important. Here is your chance to introduce a zero-waste option in your organization!

Since we are committed to sustainable development, our equipment and ingredients are as much as possible locally sourced, and we prioritize environmentally-friendly practices.

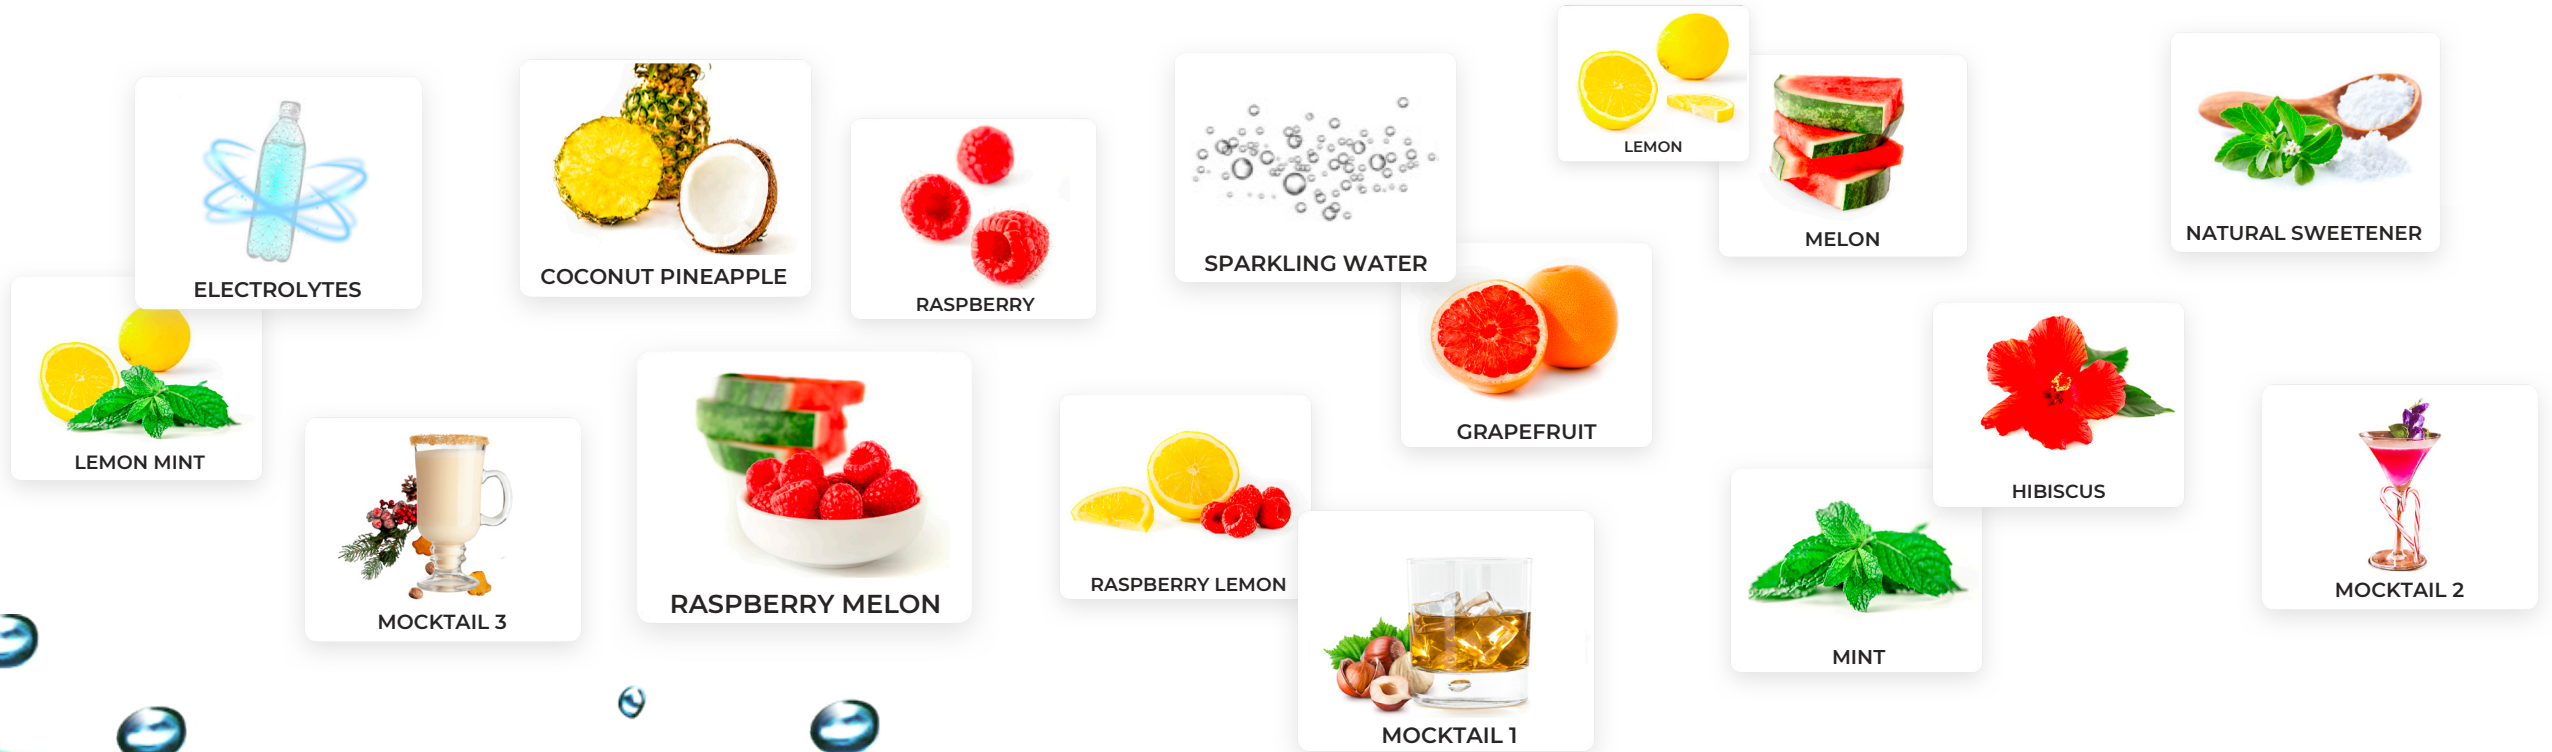

We source most of our products from providers that offer natural and allergen-free ingredients.

**KUPA Station** encourages a healthy, tasty and eco-friendly way to hydrate your body with:

- Cooled and filtered water;
- The possibility to add flavors, supplements, sparkle and a sugar-free touch of sweetness.

# OVERVIEW OF PRODUCTS

KUPA reinvents  
your water !

# TWO WAYS TO GET SERVED

## MOBILE APPLICATION:

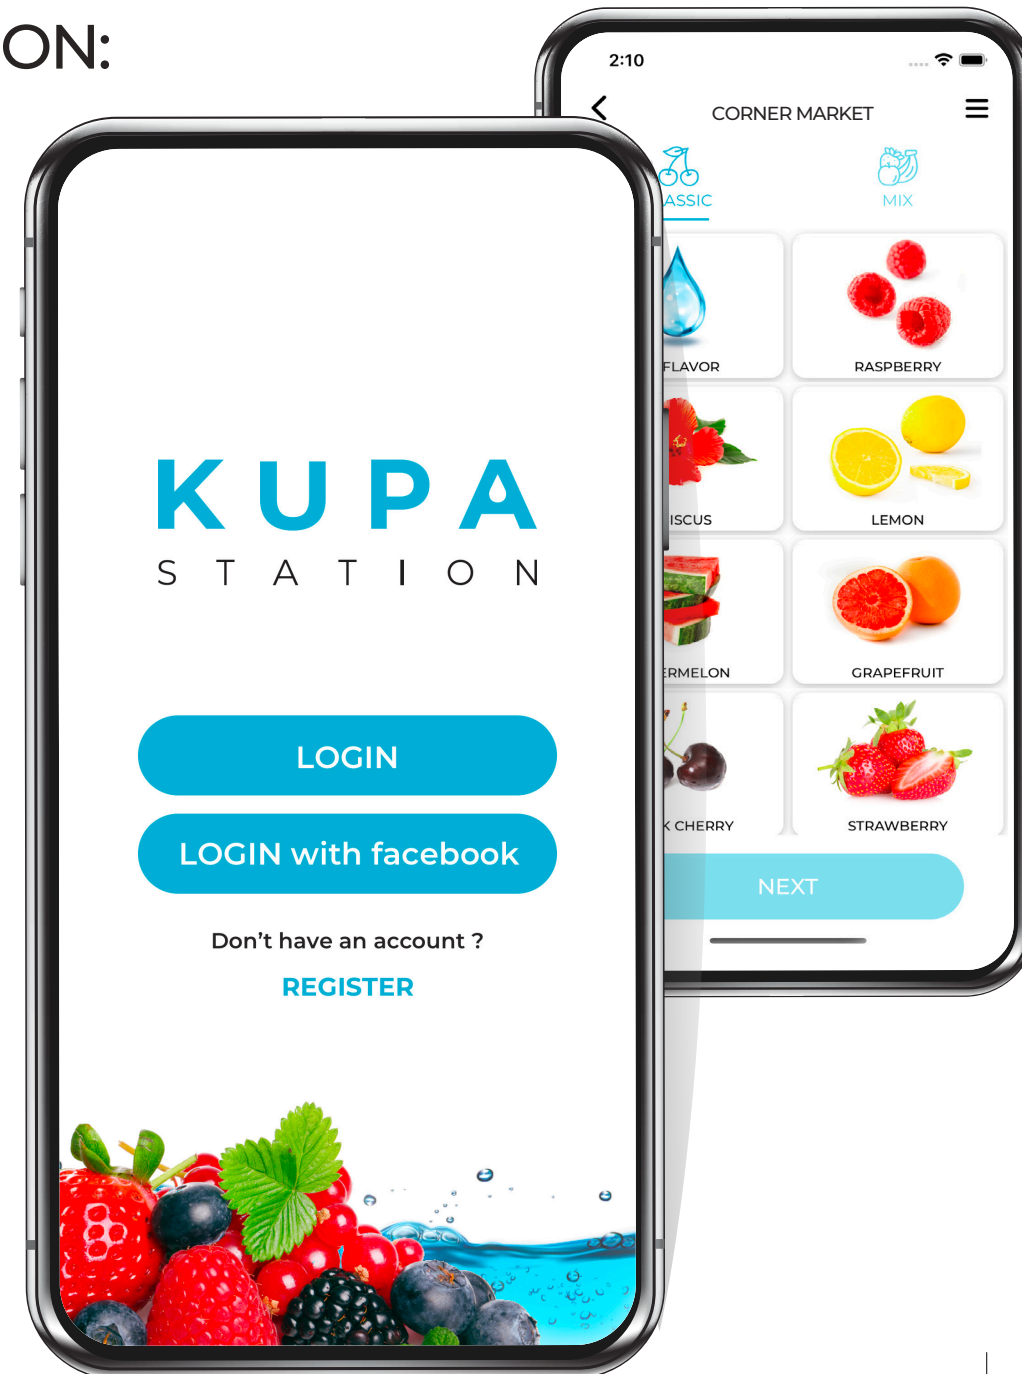

KUPA Station mobile application offers almost the same options as the station touchscreen and even enables users to pre-order their drink before coming to the station. Once they get there, all they have to do is scan the QR code and the drink will be delivered to them.

## TOUCHSCREEN :

The **KUPA Station** touchscreen presents a friendly menu with drink options, sizes and prices, as well as a meter that shows how many single-use plastic containers have been saved from being used and wasted, for that station and for all KUPA Stations.

A payment module enables users to pay their drink with a credit or debit card via Paypass.

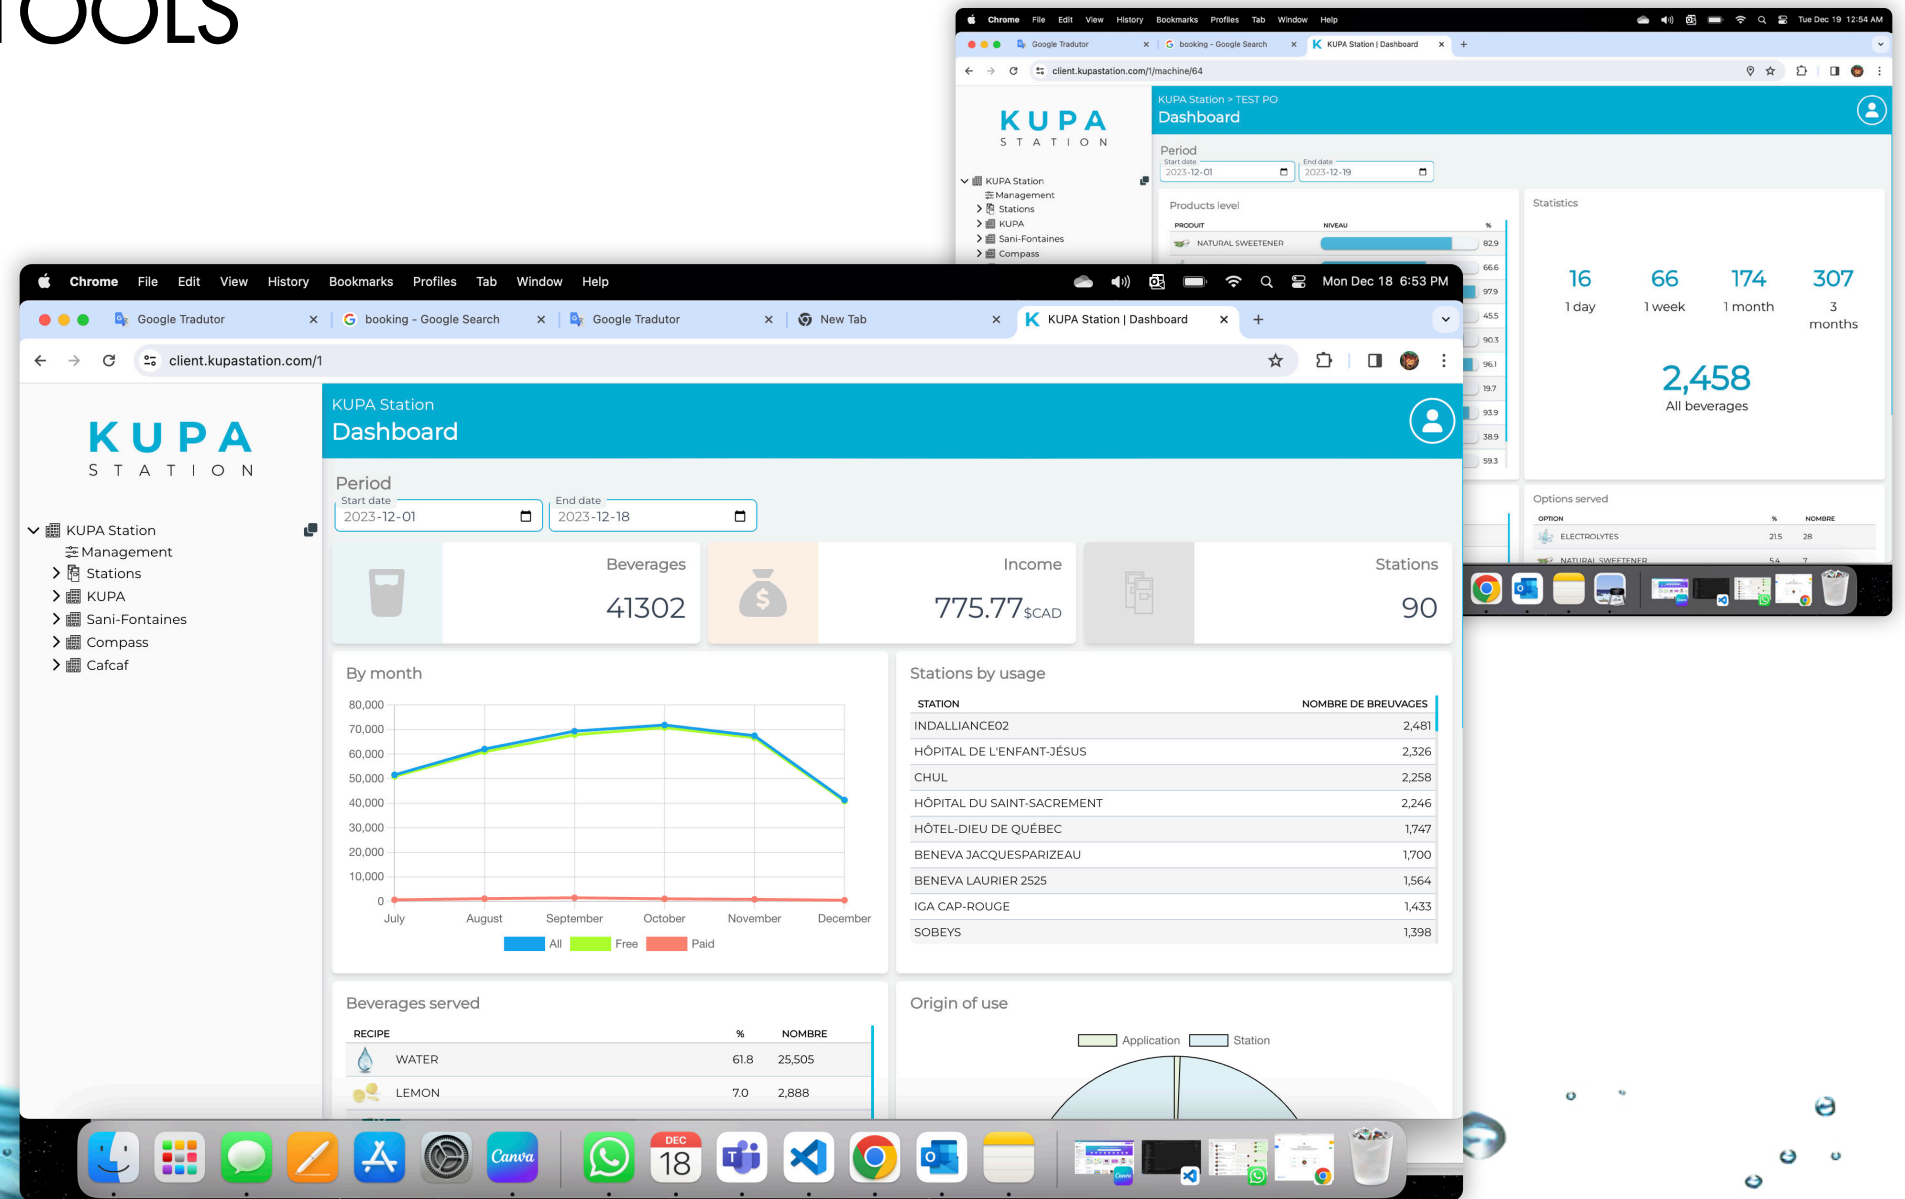

# MANAGEMENT TOOLS

With our online user interface, you can manage all your stations in an easy and centralized manner from your intelligent phone.

Our management interface is simple and instinctive and allows you to manage your configurations, to check the state of your stations and to generate statistics.

Real-time alerts can be scheduled to simplify station maintenance.

# You and your workteam would like to have a demonstration?

We would be pleased to bring our mobile showroom to your work location. You could see the station, understand how it works, and even taste our products.

# JUST ASK US!
